

MILITARY AVIATION AUTHORITY

Our work behind the scenes

We review pilots' physical and mental fitness, and set flight and duty time requirements.

We ensure coordinated military access to the airspace in order to provide air power.

We verify that maintenance organisations fulfil the applicable requirements.

We set design criteria that reflect the special requirements for military aircraft.

We enforce appropriate standards for runways, taxiways and airport lighting.

We set standards for the quality and processing of aeronautical data used in military aviation.
